

GABLE FALL SAFE ~ CONSTANT FORCE

Gable (UK) Ltd operates as part of the Approved Latchways Installer Network, with a bespoke specialist division, Gable Fall safe, addressing the specific requirements associated with the design, installation and maintenance of Fall Arrest Systems.

Continuing with the on-going development of the system, Latchways recently introduced the Constant Force Post into their range of components. The post is designed around the principals of constant force in that its internal construction mechanism acts as an integral shock absorber that dissipates the loads generated in a fall.

The Constant Force series can also be fixed to much lighter weight materials than traditionally permitted and incorporating the new non-penetrative support bracket, preserves the integrity of the roofing system itself whilst providing peace of mind on safety issues.

FEATURES & BENEFITS

- ◆ Energy absorbing brackets remove the risk of roof damage.
- ◆ Guarantees load bearing will never exceed 10kN.
- ◆ Less obtrusive, as colour matching available.
- ◆ No need to align system with structural steel or purlins.
- ◆ Posts non-penetrative, Protecting integrity of roof sheet.
- ◆ Tested in accordance with EN 795

VERSATILITY & ADAPTABILITY

Suitable to fit on all major Built-up & Composite roof profiles, the system provides a versatility & adaptability unrivalled in the Industry. We are also pleased to announce that following extensive developments & testing, we are now able to offer the advantages of the Constant Force Post to a number of Standing Seam manufacturers including Kal-Zip, Alumasc, Plannja, Euroseam, Rigidal & Key Bemo.

This engineering break-through enables the introduction of a whole new option in the delivery of height safety within the standing seam market, and at Gable UK we welcome the challenge and look forward to sharing our wealth of experience, knowledge & professional services.
