

GABLE FALL SAFE ~ SAFETY ACCESS SYSTEMS

As a leading professional within the Industry, Gable (UK) Ltd are able to provide a complete safety brief when addressing our clients needs and as such offer a comprehensive range of products to address the many varying issues associated with safety at height.

While the Fall Arrest System remains an integral element of any safety plan, individual property factors may dictate other preferred options during the evaluation process, which can be addressed as part of our total solution package.

Permanent Hand Rail Systems

Operating in conjunction with KeeKlump, the worlds leading supplier of tubular roof edge protection, Gable (UK) are proud to offer this free-standing & versatile system within our range of products. The system not only meets but exceeds current safety requirements and can be adapted to accommodate most roof edge profiles & changes in level or inclines. Designed around proven counterweight principals, it is suitable for use in either a new build or refurbishment capacity and being pre-fabricated requires no on-site drilling or welding.

Ladder Ties & Ladder Latch

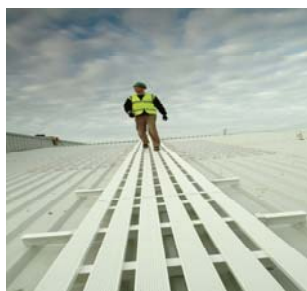

From standard ladder ties to the cable based Ladder-latch system, Gable Fall Safe can provide the most cost-effective solutions to address the access requirements on many vertical structures.

Walkway Systems

Providing a non-slip, safe walking surface at roof level and actual foot traffic protection for the roof structure itself, walkway systems are durable, flexible & can be custom designed to suit.

GABLE MANSAFE ~ SAFETY ACCESS SYSTEMS (cont)

Eyebolt & Pushlock Systems

The safety eyebolt system was originally designed to meet the needs of window cleaners & associated trades, in gaining safe access to areas of height or difficulty. Installed to either the internal or external structure of a building & used in conjunction with a full body harness, the system fulfils all legislative requirements placed on owners in relation to their Health & Safety responsibilities.

Developing the concept one stage further, the Pushlock System provides a similar service but is unobtrusive and more visually appealing in that while the anchor socket is permanently secured, the eyebolt is removable when not in use.

SAFERING VP

An Alternative to the Eyebolt, the SafeRing VP is a permanently fixed eyebolt which provides discreet fall protection for window maintenance without compromising the clean lines of interior design. This internal anchor can be fixed into walls, floors or ceilings and provided a secure point to which workers can confidently attach a lanyard and safety harness whilst performing their duties.

Both eyebolts are:

- Manufactured in 316S stainless steel for maximum durability.
- Suitable for fixing into load-bearing masonry or concrete, timber, composite slab and steel-work.
- Fully tested to 22 kN.

Classic

Contemporary

Maintaining the stringent quality procedures of all our products, SafeRing VP has been tested to all relevant European Standards and carries the appropriate CE marking of conformity.
