

## FLAT TO PITCHED CONVERSION SYSTEMS

Gable (UK) Ltd are approved installers of the Ashjack Flat to Pitched Roof Conversion system and as such are compliant with the Code of Practice established to ensure excellent standards of workmanship are maintained.

This system is one of the most innovative flat roof conversions presently on the market, transforming old or damaged roofs. The system itself provides all the associated advantages of a pitched structure, whilst addressing cost, time and flexibility issues.

Installed with a minimum of disruption to the buildings occupants, the frameworks inherent strength to weight properties also allows consideration of a complete range of roof coverings including steel or aluminium sheeting, slate, tiles or single ply membrane.

BUILDINGS

Backed by an excellent technical support service utilising the latest computer technology, both comprehensive design specifications & structural calculations can be provided as part of the initial feasibility study.

The end result is always aesthetically pleasing and affords a long-term, low-maintenance roofing option that addresses security issues, whilst considerably increasing the actual value and marketability of your property.
