

FOOTBALL STADIUMS ~ SAFETY AT HEIGHT

Gable (UK) Ltd are approved installers of the Latchways Fall Arrest System and are experienced in the design, installation & maintenance of many applications suitable to the Sports Stadium environment.

With over 25 years Industry experience and a comprehensive understanding of legislative and commercial issues associated with Stadium management, Gable (UK) are top of the table when it comes to expert advice and technical know-how.

Stamford Bridge Stadium

Our experienced staff are able to provide a total safety brief in relation to legislative “Duty of Care” responsibilities & provide feasibility recommendations offering solutions that are cost-effective, unobtrusive and compliant.

With the ever-increasing television coverage and high profile nature of the sport, it is vital that your Home Ground is presented to the highest possible level for your audience & sponsors enjoyment. To facilitate this, our systems provide safe access to areas of height or restrictive zones, to allow cleaning and on-going maintenance to be undertaken without the need for expensive, temporary scaffold to be erected.

They also address access requirements for media obligations, promotional capabilities & additional technical need without long-term planning or costly outlay.

The completed Chelsea Football Club project provided a roof-top capability to ensure the gutters & roof lights to the new East Stand will be effectively maintained and to provide safe access to gantry platforms, flood-lights & media positions.

At Gable (UK) we pride ourselves on the consistently high standards of performance we afford our clients and as such we invite you to test our commitment to service, quality and workmanship.
