

KENWOODS FACTORY ~ HAVANT

The over-cladding of a deteriorating building envelope is an effective method of achieving aesthetically pleasing results without the cost & time implications associated with a strip & re-sheet project.

Probably the biggest benefit provided by this option, is that the refurbishment works involve a minimum of disruption to building occupants, ensuring that productivity remains unaffected during the construction phase. A comprehensive range of replacement materials is also available, with the system accommodating application to virtually any existing structure subject to site survey. It is rapidly becoming the option of choice for many companies who are recognising it as the most suitable solution to their individual needs.

With extensive experience specifically within this refurbishment sphere, Gable UK Ltd have completed many such projects across the south coast, including the Kenwoods Factory over-clad illustrated above. As you can see the existing dated exterior was replaced by an impressive, modern appearance, creating a much more contemporary visual with the installation of metallic silver, single skin steel sheets.

The project was also carried out in a fraction of the time a traditional refurbishment would have taken, providing savings in labour, materials & plant costs, whilst substantially increasing the actual value of the property.

Total Package Provided by Gable UK
