

MENCAP SPECIAL NEEDS DWELLINGS HAVANT

This Mencap building in Havant comprises factory smooth curved Kal-Zip standing seam sheet curved to an 11.000mm radius with a PVF2 weathered zinc finish on and including 180mm thick insulation, vapour control layer and factory pre-curved steel lining sheet.

The work also involved sun pipes to the ridge which were specialist welded to the polyester powder aluminium coated two piece curved verge detail and high level bullnose feature detail.

With the contrast brickwork and terracotta tiles to the elevations it has become a striking building in the middle of Havant town centre.
