

SELHURST RAIL DEPOT, LONDON

Phase 1—The Cleaning Sheds

Project involved the stripping & re-sheeting of 10,000M² asbestos cement sheds incorporating steelwork, glazing & rainwater systems. A strategically challenging project involving complex methodology undertaken within the difficult confines of an operational rail depot

BEFORE

DURING

AFTER

Phase 2—The Repair Sheds

12,000M² refurbishment of occupied building to compliment adjacent cleaning shed, including the installation of new sheets, fall arrest, rainwater & safelight systems, and involving specialist protection & access requirements.
